

Team Flying Karate Masters: Matthew Yee, Joseph Wu, Kevin Li

SoftDev

P00 – Storytelling Game

2022 – 10 – 30

Time spent: 1 hour

Program components

- Login page + registration page
 - We also need a way to prevent duplicate usernames
 - Ability to log out and sign into other accounts
 - Ability to store login info for use in other parts of the website
- Version history for every story
 - Track which users made edits to the story, and prevent those users from adding again
- Databases
 - One database for the stories
 - One table per story, one story per page
 - One database for the users
- Navigation between pages
 - A search bar
 - Hyperlinks to featured stories
- Main page
 - Ideally accessible from any story page
 - Shows a list of ongoing stories
 - A way to organize the stories by length so that users can see the most popular and least popular stories
 - Shows a list of all stories the user has contributed to
 - Button to create a new story
- Story page
 - If the user has not contributed to the story, they are shown the most recently added section and are given the ability to add on
 - If the user has contributed already, they are shown the full story
- Editing capabilities
 - Users can only add to an ongoing story once
 - Character limits on each edit
 - Users can only add to ongoing stories, they cannot delete existing text
 - No character limit upon starting a new story
 - Ability to add title to the new story

Relation between components

- User starts at the login page is prompted to input a username and password or register
 - If they click register, they are taken to the registration page, where they will create an account using a username and password
 - The username must be unique, meaning that no other existing account has that username
 - After the account is created, they will be redirected to the login page
 - If they log in with a registered username and password, they will be redirected to the main page
- After login in, they are taken to the main page
 - Main page presents you with a bunch of stories titles and a button to create your own story
 - Clicking the create button sends you to a page that prompts you to enter the title and the first section
 - A table is created with the given title and the first record stores the inputted text, and the username of the user who submitted it
 - Clicking on an continue story button (edit existing story) will check if the user's name is in the table's name field
 - If their name is there, they get shown the entire text field
 - If their name isn't, they get shown the last record

Database organization

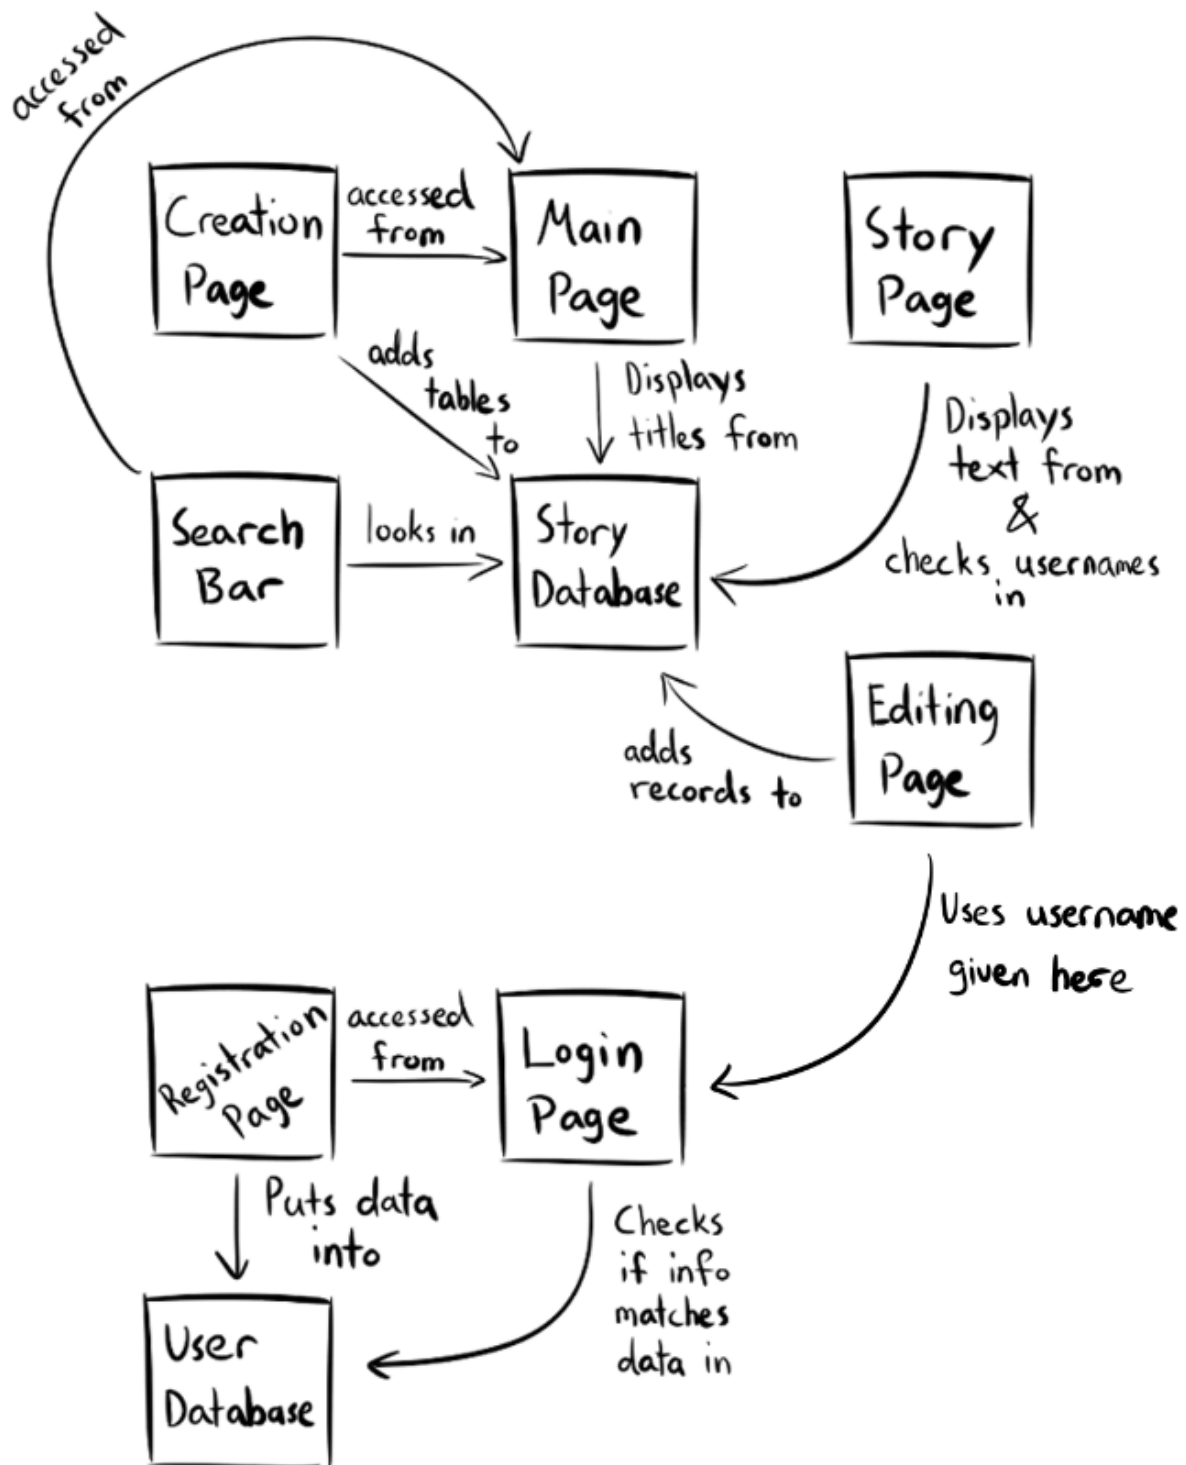

- Two databases: one for users and one for stories
 - The database containing stories would consist of one table for each story
 - Each entry will add a row with string values
 - Each table would look like this:

<u>Entry</u>	<u>Username</u>
The fitnessgram pacer test is a multistage aerobic capacity test that progressively gets more difficult as it continues	“HelloWorld”
This would be a new entry	“IamMe”

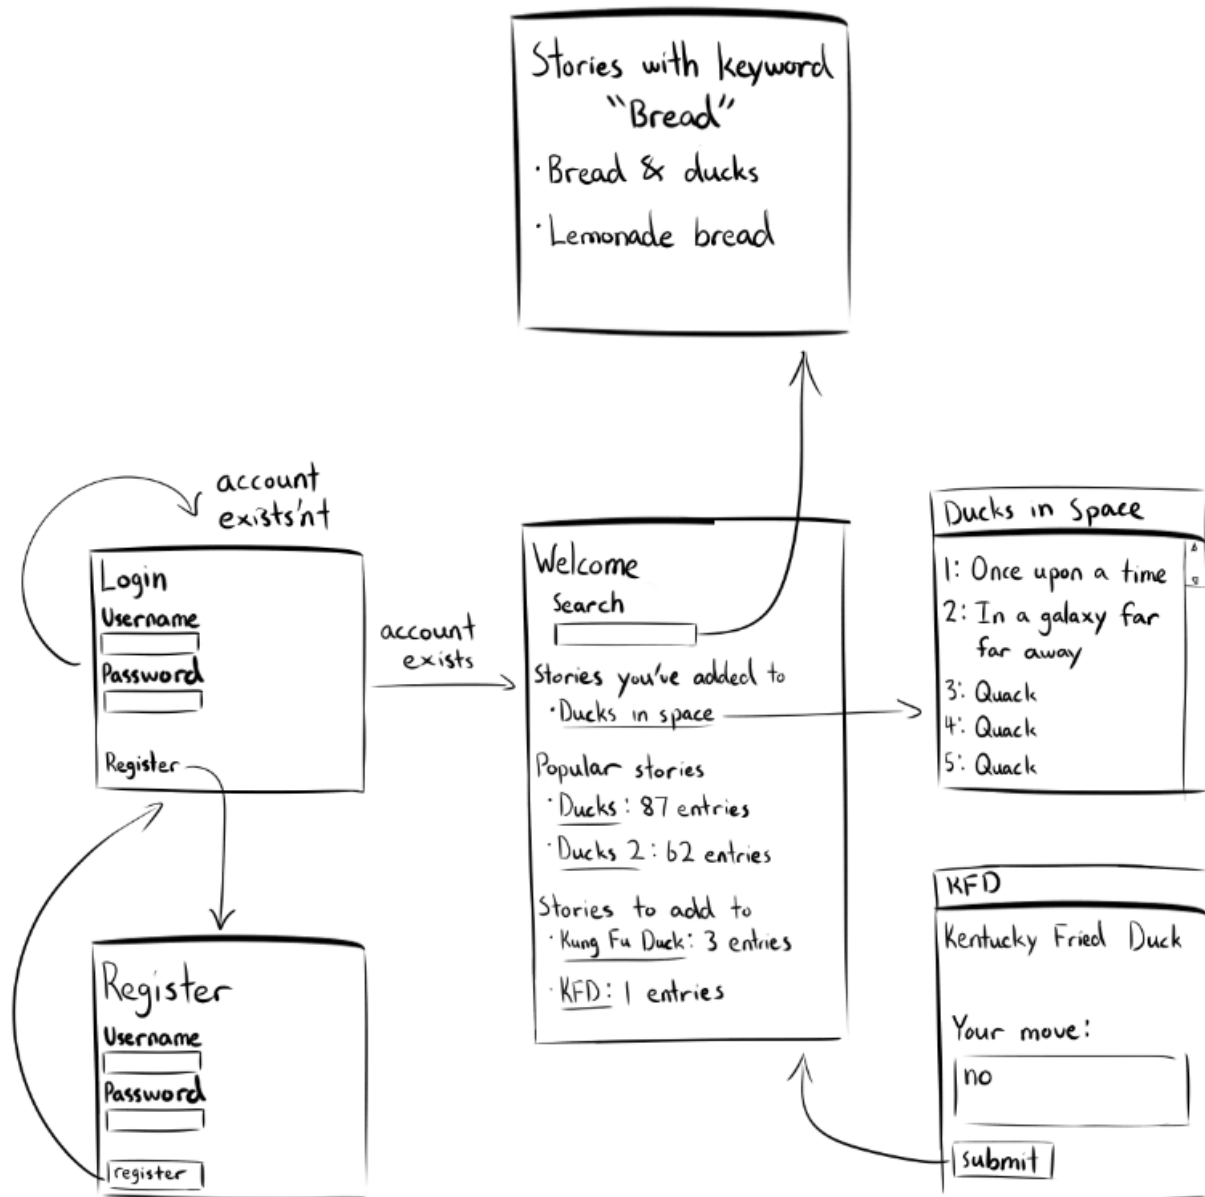

- When a user registers on the website, their username and password are entered into the user database
 - Table for users and their passwords:

<u>Username PRIMARY KEY</u>	<u>Password</u>
“MisterRogers”	“itisabeautifulday”
“DuckEnthusiast”	“gotanygrapes?”

Component map

Front end site map

Tasks:

Joseph

- Linking the pages together - hyperlinks and search bar
- Creating log-in and log-out functionality
- Storing and creating accounts

Kevin

- Storing stories and version history
- Registration page and main page templates
- Story display functionality based on account access

Matthew

- Function for organizing stories by number of entries
- Editing capabilities
- Story creation capabilities

Stretch Goals

- Recording time of submitted entries into database
 - Making a “Popular Today” kind of thing
